

**Obstetric management of infections in pregnancy and management of the newborn**

Professional outlets: The course will permit, at the end, to perform a correct diagnosis, treatment and management of patients with peri-conceptual and conceptual prenatal infection. In particular, the immunological, diagnostic, microbiological and serological aspects studied will allow to better stratify the maternal risk in terms of the possibility of fetal damage. The course will also permit the student to become familiar with the protocols for the management of infectious diseases, both for the mother and for the newborn/child. Finally, the course will provide the tools for a correct diagnosis of pediatric pathologies subsequent to maternal infectious disease, including the therapeutic possibilities and the most suitable diagnostic tools. At the end of the course, students will be able to increase their skills or they team management of patients with infection disease, and fetuses or children follow up.

Director: Erich Cosmi
