

**The dental hygienists: a key player in the treatment of the implant patient**

Professional outlets: Rehabilitation through dental implant therapy is increasingly used by dental professionals. More and more patients are in need of maintenance and treatment therapies of dental implants that support prosthetic rehabilitations. The knowledge in this field is constantly evolving as well as the materials and techniques available to the professional and the patient. The course aims to train competent dental hygienists in the field of prevention and treatment of peri-implant diseases in line with the new scientific acquisitions in order to offer increasingly high quality care.
