

## UNIPD Double Degree testimonials: students' success stories

### Marco Miolo

Programme: Master's Degree programme in Mechanical Engineering

T.I.M.E. Double Degree Programme in Mechanical Engineering with DTU - Technical University of Denmark (Denmark)

### Something about me

I'm Marco, originally from Padova, Italy. I pursued a double degree in Mechanical Engineering at the University of Padova and the Denmark Technical University (DTU). My passion lies in fluid mechanics, and I've been fortunate to explore this field across two remarkable institutions. Toward the conclusion of my Master's programme, I spent five months in Switzerland at EPFL, where I conducted my thesis project in the Laboratory of Applied Mechanical Design. This was a transformative academic experience that combined cutting-edge research with hands-on learning. If I were to advise anyone considering a double degree or international experience, I would wholeheartedly recommend it. Immersing yourself in a different academic and cultural environment not only deepens your expertise, but also helps you better understand who you are and what you want out of life.

### About my UNIPD Experience

#### What do you like the most about the degree programme? Would you recommend it?

What I liked most of the University of Padua was the fact of having courses facing very complicated matters in a deeply technical way. This allows you to gain many skills that are incredibly important for an Engineer. I would recommend studying at the University of Padua because there are some very outstanding professors in some specific fields such as mine.

#### What are the main features of your double degree programme?

I lived the full experience of the double degree, while following my passions and study line of interest. I followed a track focused on fluid mechanics and thermodynamics. At DTU I had the opportunity of having some real experimental courses, something that before I did not have at the University of Padua.

#### What is the added value in participating in these kind of programmes (academic and private)?

Immersing yourself in a different academic and cultural environment not only deepens your expertise but also helps you better understand who you are and what you want out of life. It's a journey that broadens horizons, challenges assumptions, and fosters personal transformation.
